PROJECTS

HPH Connect

Client : Harvard Pilgrims Health Care, USA Role : Development, Designing, Analysis

Environment: SpringBoot, Java, Hibernate, Java8

Team Size : 09 Members

Description :

This project manages the subscribers for various types of health insurance policies. Subscribers can be registered through a Broker on behalf of an employer. One party Id is assigned to the subscriber. Same party id is used for the dependents. Subscriber can edit the information of dependents but dependents cannot edit the information of subscribers. Employer can also directly contact providers who is providing insurances. Before enrolment for the employer, employer has to fill some pre-enrolment form. Based on the information filled in the form, insurance provider company will give the rates for the policies. This application is connected with various applications supporting for the provider company.

Responsibilities :

- Involved in gathering the requirement for project.
- Written Spring Service Interfaces and their implementations.
- Implemented Entity and Binding classes.
- Configure hibernate with Spring Boot which reduced DAO object creation time.
- Create Controller class as per requirement. Written POJO classes to get and set data from DB.
